B) \$1500

C) \$1600

D) \$2400

E) \$2500

27. A lacrosse team raised some money. The members used 74% of the money to buy uniform, 18% for equipment, and the remaining \$216 for a team party. How much money did they raise?

A) \$2400

B) \$2450

B) 18

C) 15

D) 12

32. Last year Jose sold a painting for \$2000. If he made a 25% profit on the sale, how much had he paid for the painting?

A. \$1200

C. \$1500

C. \$1600

D. \$2400

E. \$2500

Jose made 25% profit, so if he bought the painting for x , he sold it for: $x + 0.25x = 1.25x = 2000 \Rightarrow x$

$= 2000 \div 1.25 = 1600.$

The answer is (C).

33. In the figure below what is the value of b ?

A. 30

B. 36

C. 45

D. 60

E. 72

34. Since vertical angles have the same measure, $c = d$, $d = a$, and $b = a - b$
 $a = 2b$.

Therefore, $c = d = a = 2b$. Also, the sum of the measures of all six angles is 3600, so $a + b + c + d + a - b + d = 2a + c + 2d = 360$. Replacing c , d , and a by $2b$ yields

$$10b = 360 \Rightarrow b = 36.$$

The answer is (B).

35. A lacrosse team raised some money. The members used 74% of the money to buy a uniform, 18% for equipment, and the remaining \$216 for a team party. How much money did they raise?

A. 2400

B. 2450

C. 2500

D. 2600

E. 2700

SINCE $74\% + 18\% = 92\%$, THE \$216 spent on the party presents the other 8 % of the money raised. Then: $0.08m = 216 \Rightarrow m = 216 \div 0.08 = 2700$.

The answer is (E).

36. In the figure below, what is the sum of the degree measures of all of the marked angles?

A. 600

B. 620

C. 700

D. 720

E. 750

Each of the 10 marked angles is an exterior angle of the Pentagon. If you take one angle at each vertex, the sum of the degree measures of those five angles is 360; the sum of the degree measures of the other five also is 360: $360 + 360 = 720$.

The answer is (720).

37. If the measures of the angles of a triangle are in the ratio of 1:2:3, and if the perimeter of the triangle is $30 + 10(3)^{1/2}$, what is the length of the smallest side?

A. 20

B. 18

C. 15

D. 12

E. 10

38. What is the area of Triangle ABC?

A. 350

B. 360

C. 370

D. 375

E. 390

The area of Triangle CDE = $0.5(8)(15) = 60$. Since the ratio of similitude for the two triangles (as

Calculated in solution C15) is 2.5, the area of Triangle ABC is $(2.5)^2$ times the area of CDE: $(2.5)^2 \times 60 =$

$6.25 \times 60 = 375$. **The answer is (375).**

39. What is the perimeter of Triangle ABC?

A. 80

B. 85

C. 95

D. 100

E. 105

Solution

By the Pythagorean theorem, $8^2 + 15^2 = (CE)^2$ $(CE)^2 = 64 + 225 = 289$ $CE = 17$. Then the perimeter of

$CDE = 8 + 15 + 17 = 40$. Triangles ABC and CDE are similar (each has a 90° angle, and the vertical angle at C are congruent). The ratio of similitude is = 2.5, so the perimeter of ABC is $2.5 \times 40 = 100$. **The answer is (100).**

40. If the difference between the measures of the two smaller angles of a right triangle is 20°, what is the measure, in degrees, of the smallest angle?

A. 30

B. 35

C. 40

D. 45

E. 50

41. What is the area of Triangle BED in the figure below were ABCD is a triangle?

A. 12

B. 24

C. 36

D. 48

E. 60

You can calculate the area of the rectangle and subtract the area of the two white right triangles, but don't. The shaded area is a triangle whose base is 4 and whose height is 12. The area is $(4)(12) = 24$. **The answer is (B).**

42. In an office, there was a small cash box. One day Ann took half of the money plus \$1 more. Then Dan took half of the money plus \$1 more. Stan then took the remaining \$11. How many dollars were originally in the box?

A. \$50

B. \$45

C. \$42

D. \$40

E. \$38

Solution

You can avoid some messy algebra by working backward. Put back the \$11 Stan took; then put back the extra \$1 that Dan took. There is now \$12, which means that, when Dan took his half, he took \$12. Put that back, now there is \$24 in the box. Put back the extra \$1 that Ann took. The box now has \$25, so before Ann took her half, there was \$50. **The answer is (\$50).**

43. Each of the 10 players on the basketball team shot 100 free throws, and the average number of baskets made was 75. When the highest and lowest scores were eliminated the average number of baskets for the remaining 8

players was 79. What is the smallest number of baskets anyone could have made?

A. 22

B. 20

C. 18

D. 16

E. 14

Since the average of all 10 players was 75, the total number of baskets made was $10 \times 75 = 750$. Also, since 8 of the player had an average of 79, they made a total of $8 \times 79 = 632$ points. The other 2 players therefore, made $750 - 632 = 118$ baskets. The most baskets that the player with the highest number could have made, was 100, so the player with the lowest number had to have made at least 18. **The answer is (C)18.**

44. Karen played a game several times. She received \$5 every time she won and had to pay \$2 every time she lost. If the ratio of the number of times she won to the number of times she lost was 3:2, and if she won a total of \$66, how many times did she play the game?

A. 30

B. 35

C. 40

D. 45

E. 48

Karen won $3x$ times and lost $2x$ times, and thus played a total of $5x$ games. Since she got \$5 every time she won, she received $\$5(3x) = \$15x$. Also, since she paid \$2 for each loss, she paid out $\$2(2x) = \$4x$.

Therefore, her net winning were $\$15x - 4x = \$11x$, which you are told was \$66. Then, $11x = 66 \Rightarrow x = 6$, and so $5x = 30$. **The answer is 30**

45. Since 1950, when Martin graduated from high school, he has gained 2 pounds every year. In 1980 he was 40% heavier than in 1950. What percent of his 1995 weight was his 1980 weight?

A. 80

B. 85

C. 87.5

D. 90

E. 95

Solution

Let x = Martin's weight in 1950. By 1980, he had gained 60 pounds (2 pounds per year for 30 years) and was 40% heavier: $60 = 0.40x$ $x = 60 \div 0.4 = 150$. In 1980, he weighed 210 pounds, 15 years later, in 1995, he weighed 240: $210/240 = 7/8 = 87.5\%$. **The answer is C.**

46. Henry drove 100 miles to visit a friend. If he had driven 8 miles per hour faster than he did, he would have arrived in of the time he actually takes. How many minutes did the trip take?

A. 100

B. 120

C. 125

D. 144

E. 150

47. Two printing presses working together can complete a job in 2.5 hours. Working alone, press A can do the job in 10 hours. How many hours will press B take to do the job by itself?

A. $10/3$

B. 4

C. 5

C. $25/4$

E. $15/12$

Multiply each term by $10x$: $2.5x + 25 = 10x$

.Subtract $2.4x$ from each other: $25 = 7.5x$

. Divide each side by 7.5 : $x = 3$ hours. **The answer is A.**
